Language of the materials

The collection is in English, with some materials in Hungarian.

Information for Researchers

Access

The collection is open for research.

The Hoover Institution Archives only allows access to *copies* of audiovisual items. To listen to sound recordings or to view videos or films during your visit, please contact the Archives at least two working days before your arrival. We will then advise you of the accessibility of the material you wish to see or hear. Please note that not all audiovisual material is immediately accessible.

Publication Rights

Acquisition Information

Materials were acquired by the Hoover Institution Archives in 1976, with increments acquired through 2003.

Accruals

Materials may have been added to the collection since this finding aid was prepared. To determine if this has occurred, find the collection in Stanford University's online catalog at <http://searchworks.stanford.edu/>. Materials have been added to the collection if the number of boxes listed in the catalog is larger than the number of boxes listed in this finding aid.

Edward Teller Papers, 1910-2005

Scope and Content Note

Edward Teller was a nuclear physicist whose work was instrumental in the development of the hydrogen bomb. His papers, which document his life and career, include correspondence, speeches and writings, reports, studies, memoranda, printed matter, photographs, motion picture film, video recordings, sound recordings, and memorabilia related to chemical, molecular and nuclear physics; development of new energy resources; national energy research planning; space exploration; and national and international security issues, including nuclear weapons and arms control.

The majority of the material was received as an increment to the original collection, with documents originating from offices at the Hoover Institution, where Teller was a fellow, and Lawrence Livermore National Laboratory, an organization which Teller helped to found and where he later served as director. The original accession contains **Correspondence** with Hans Bethe, Cresson Kearny, Nelson A. Rockefeller, and Lewis Strauss, as well as documents concerning the **Commission on Critical Choices for Americans**.

Born in Hungary in 1908, Teller received his Ph.D. while studying in Germany. In 1935, he immigrated to the United States, where he became a professor at George Washington University and was later employed at Los Alamos National Laboratory as a member of the Manhattan Project. During his career, Teller taught at various universities and authored several books. The **Incremental biographical file** contains book-length works written about Teller's life, as well as a booklet created from an exhibit on Teller at the Lawrence Livermore National Laboratory. The file also includes calendars and documents related to Teller's birthday celebrations. See the **Incremental oversize material** for a scrapbook of letters given to Teller upon his retirement and certificates awarded to Teller.

The incremental correspondence is arranged in three series based on provenance of material. The **Incremental general correspondence** includes letters of Teller's family members, in addition to correspondence from both offices where he worked. The **Incremental Hoover Institution correspondence** contains letters of Hans Bethe, Sidney Drell, Freeman Dyson, Dwight D. Eisenhower, Henry A. Kissinger, Eugene Wigner, and Lowell Wood, as well as autograph requests that Teller received. The **Incremental Lawrence Livermore National Laboratory correspondence** as well as the **Incremental Lawrence Livermore National Laboratory alphabetical file** include letters related to Teller's scientific work, political advocacy, and business dealings. The correspondence regarding his professorial work is related to his research at Lawrence Livermore National Laboratory and his position at the Department of Applied Science, a joint program of LLNL and the University of California, Davis. In addition, these series include correspondence with colleagues at other research facilities, especially from Los Alamos National Laboratory. The bulk of Teller's political papers fall into two categories: correspondence with public figures regarding his support for the development of a thermonuclear deterrent arsenal and anti-ballistic missile defense systems, and documents related to his position on various governmental advisory boards and committees. For additional correspondence, see also the research files for Teller's memoirs.

Scope and Content Note (Contd.)

The **Incremental Hoover Institution alphabetical file** consists of files on political and scientific topics, mainly relating to nuclear weapons. This file contains material on the atomic bomb, nuclear reactors, radiation, and the Strategic Defense Initiative.

Teller maintained two offices, one at the Hoover Institution and one at Lawrence Livermore National Laboratory. The **Incremental general office file** consists of Teller's calendars, documenting a hectic schedule that required him to switch between his two offices and travel frequently. Additional schedules and correspondence can be found in the **Incremental Hoover Institution office file**, which documents Teller's working life as a Hoover Institution fellow. The **Incremental Lawrence Livermore Office file** contains a publicity file that includes news stories concerning Teller, interview correspondence, and autograph requests. Teller's extensive lecturing and consultation work required frequent travel, and this aspect of Teller's life is particularly well-represented in the travel file.

In addition to publishing numerous scientific papers, Teller wrote on issues of defense and the use of nuclear weapons. The **Incremental general speeches and writings** contain drafts and working material for several of Teller's monographs, as well as for the unpublished work *Technology in Warfare*. The **Incremental Hoover Institution speeches and writings** include files on Teller's speeches for various organizations and venues, while the **Incremental Lawrence Livermore National Laboratory speeches and writings** consist of a chronological file of Teller's writings.

While working on his memoirs, Teller gathered correspondence of significance written and received over his long career and, along with his editor Judith Shoolery, conducted interviews with people who played a role in his life. The research material in the **Incremental memoirs file** includes correspondence of notable scientists and politicians such as Hans Bethe, Niels Bohr, Freeman Dyson, Barry Goldwater, Werner Heisenberg, Herbert Hoover, Lyndon B. Johnson, Leo Szilard, and Harry Truman, as well as research material related to Project Plowshare and Teller's time as a professor at the University of Chicago. In 1954, Teller testified in a hearing concerning the security clearance of J. Robert Oppenheimer, a physicist who served as an adviser to the Atomic Energy Commission. Teller's testimony provoked responses from members of the scientific community who felt that his testimony was a factor in the decision to revoke Oppenheimer's security clearance. The most extensive files on Oppenheimer in the collection can be found in the research files for Teller's memoirs.

Teller was an active proponent of Project Plowshare, a government program that aimed to use nuclear explosions for peaceful purposes, such as canal construction. The **Incremental Project Plowshare file** includes materials on Project Chariot, which was an attempt to construct a harbor in Alaska using nuclear explosions, and the Kra Canal. For additional material on Project Plowshare, see also research materials used for Teller's memoirs.

Throughout his career, Teller served in a variety of professional roles, including as a professor, consultant, and member of various boards. The **Incremental professional activities file** documents several of these roles, including his position at the Department of Applied Science, a UC Davis program conducted at Lawrence Livermore National Laboratory. In addition, this file includes information on Teller's involvement in the Hertz Foundation and the Edward Teller Center for Science, Technology, and Political Thought.

Scope and Content Note (Contd.)

The **Incremental writings by others** series contains monographs inscribed by various authors such as Richard Nixon and Henry Kissinger, as well as writings by members of Teller's family.

The Teller papers include a sizable amount of audio-visual material. There are **Incremental photographs** of Teller at various stages of his life and photographs of Teller accompanied by prominent figures such as Ronald Reagan and Andrei Sakharov. Also included are digital photographs available on the computer workstation in the Hoover Archives reading room. The **Incremental sound recordings** and **Incremental video recordings** include recordings of Teller's speeches and interviews, as well as of Teller playing the piano. Several transcripts of recordings are interspersed within these series. Also included are **Incremental motion picture film**, containing an interview of Teller, and **Incremental computer discs**, containing data on Uranium.
