

CHAPTER II

Geographical Distribution.

The Japanese population in the United States was concentrated in a few limited areas on the Pacific Coast. In 1940 there were 126,947 persons of Japanese ancestry, native and foreign-born, constituting less than one-tenth of one per cent of the total population. The bulk of them, 112,353, or 88.5 per cent, were living in California, Oregon and Washington. California had the highest number, 93,717 or 73.8 per cent of the total Japanese in this country, comprising a more significant portion (1.36 per cent) in the State population of 6,907,387. Washington was next with 14,565 Japanese (11.5 per cent of total Japanese in U.S.), and third, Oregon with 4,071 (3.2 per cent). In the eight Mountain States¹ 8,574 Japanese (6.8 per cent) were scattered.

Further concentration was found within the three Pacific Coast States. In California, more than a half of the Japanese (52.1 per cent of total Japanese in the State) lived in Los

1. Montana, Colorado, Idaho, Wyoming, New Mexico, Arizona, Utah and Nevada.

Angeles, Sacramento and San Francisco counties. In Los Angeles County alone, there were 36,866 (39.3 per cent of State total), i.e., almost one out of three Japanese in this country (29.0 per cent of U.S. total). The population in Sacramento County was 6,764 (7.2 per cent of State total); and in San Francisco County, 5,280 (5.6 per cent). Other areas of concentration were Alameda County with 5,167 (5.5 per cent), Fresno County with 4,527 (4.8 per cent), and San Joaquin County with 4,484 (4.8 per cent).

In the other two States, most of the Japanese were located in two areas, around Puget Sound in Washington, and Portland, Oregon. In King County (check) there were 9,863 Japanese (67.7 per cent of the total in Washington), and in Pierce County 2,050 (14.1 per cent). That is, more than three out of four Japanese in Washington were found around Puget Sound. In Multnomah County there were 2,390 Japanese (58.7 per cent of the total in Oregon).

It is evident from the above analysis of distribution by County that the majority of the Japanese lived in or near large cities. The Japanese population in the major cities on the

Pacific Coast for 1940 is reported by the Census as follows:

	No. of Japanese	Per cent of City Popu- lation	Per cent of total Japa- nese in U.S.
Los Angeles	23,321	1.6	18.4
San Francisco	5,280	0.8	4.2
Sacramento	2,879	2.7	2.3
Seattle	6,975	1.9	5.5
Portland	1,680	0.6	1.3

Although the Japanese thus constituted a small portion of the cities' population, their presence was conspicuous more than the percentages would indicate because of concentration in small areas within the metropolitan limits. In Los Angeles, for example, there were three major residential areas, viz., "Little Tokyo," "Boyle Heights," and "the Southwest District." "Little Tokyo," the main commercial district, was roughly bounded by Main Street, Alviso Street, Second Street, and the Los Angeles River. The approximate boundaries of "Boyle Heights" were Boyle Avenue, Indiana Street, First Street, and Fifth Street. "The Southwest District" usually referred to the area bounded by Jefferson Boulevard, Western Avenue, Exposition Boulevard, and

Vermont Avenue. It was estimated that each of these three areas contained nearly 5,000 Japanese inhabitants. In San Francisco the bulk of the Japanese were found in a small area bounded by Octavia, California, Ellis, and Fillmore Streets. In Sacramento the corresponding area was located approximately between K and P Streets and Second and Fifth Streets. The concentration in Seattle was found in the area with its axis at Twelfth Avenue between Yesler Way and Jackson Street.

The tendency toward concentration in these few areas had been in operation over several decades. In general, there were two major trends in the population shifts of the Japanese, (1) steady movements to Los Angeles and surrounding areas both from other States and from northern parts of the State, and (2) from rural to urban areas. The peak years for this migration were 1920-1930.

The Japanese population had been shifting steadily into California. In 1910 the Japanese in California numbered 41,356, constituting 57.3 per cent of the total Japanese in continental

United States. In 1920 the number increased to 71,952 or 64.8 per cent; in 1930, 97,456 or 70.2 per cent; and in 1940, 93,717 or 73.8 per cent. In contrast, the Japanese population in other states failed to increase at the same rate, or in some others actually decreased in the thirty year period. Washington, for instance, contained 12,929 Japanese inhabitants or 17.9 per cent in 1910, but in the thirty years increased only slightly to 14,565, which forced the percentage of relative distribution down to 11.5 per cent in 1940. The Japanese population in the eight Mountain States numbered 10,447, constituting 14.5 per cent, but it decreased to 8,574 or 6.8 per cent in 1940.

In California itself population shifts tended southward. In the part of the State south of the Tehachapis, commonly referred to as southern California,¹ there were 11,550 Japanese or 27.9 per cent of total Japanese in the State in 1910. The population grew rapidly in the next thirty years; in 1920, 25,980 or 36.1 per cent; in 1930, 42,133 or 43.2 per cent; and

1. Counties included are Imperial, Los Angeles, Orange, Riverside, San Bernardino, and San Diego.

in 1940, 43,278 or 46.2 per cent. More specifically, the population in Los Angeles County increased from 8,461 or 20.5 per cent of the State total in 1910, to 19,911 or 27.7 per cent, 35,390 or 36.3 per cent, and 36,866 or 39.3 per cent in 1920, 1930, and 1940, respectively. In contrast, the population changed in the San Francisco Bay Area² from 8,341 or 20.2 per cent in 1910 to 11,815 or 12.6 per cent in 1940. The figures for 1920 and 1930 are 11,382 or 15.8 per cent and 13,292 or 13.6 per cent, respectively. The population in Sacramento County dwindled from 3,874 or 9.4 per cent in 1910 to 6,764 or 7.2 per cent in 1940.

The movement of the Japanese from rural to urban areas, as changes in the relative distribution of urban and rural populations would indicate, was a phenomenon on the Pacific Coast, particularly in California. In 1910 and 1920 the Japanese were almost equally divided in urban and rural areas. In 1910, 49.8 per cent were living in urban areas on the Pacific Coast and 50.2 per cent in rural areas, while in 1920 the corresponding figures were 48.7 per cent and 51.3 per cent, respectively. A

significant shift took place in the years 1920-1930, probably shortly after the enactment of anti-alien land laws in the West Coast states; the ratio swung toward the urban, viz., from 48.7 per cent in 1920 to 55.3 per cent in 1930. The preponderance of urban over rural population was maintained in 1940, when the ratio was 56.0 per cent and 44.0 per cent, respectively. The California trend of population shifts for this period followed similar patterns as on the Pacific Coast. The urban to the rural population ratio in California was 45.0 per cent to 55.0 per cent in 1910; 46.2 per cent to 53.8 per cent in 1920; 54.8 per cent to 45.2 per cent in 1930; and 55.8 per cent to 44.2 per cent in 1940. In contrast, Washington had been predominantly urban since the early days and had changed little in relative distribution in 1910-1940. The ratio for Washington is 64.0 per cent to 36 per cent in 1910; and 60.4 per cent to 39.6 per cent in 1940. The small Japanese population in Oregon, on the other hand, changed its relative distributions from 54.5 per cent in 1910 to ~~4x8~~ 46.1 per cent in 1940 for urban areas.

Socio-economic factors contributing to and affected by the movement toward Southern California and toward concentration in urban areas will be examined in the succeeding chapters.
